

BD aspires to improve medication safety in Canada

BD invites you to join us at a breakfast symposium, held in conjunction with the 2019 Canadian Anesthesiologists' Society (CAS) Annual Meeting at the Calgary TELUS Convention Centre (120 Ninth Avenue SE, Calgary, AB).

Date/Time: Sunday, June 23rd from 0645 – 0800 a.m.

Location: Hyatt Regency Calgary, Imperial Ballroom 5/7/9

The administration of propofol using Target-Controlled Infusion (TCI) workflows has shown improved accuracy and predictability in titrating to effect for procedural sedation¹. In this symposium, Dr. Keith Anderson will explore how the use of TCI in procedural sedation can lead to a safer practice for patients and peace of mind for anesthesiologists.

The key objectives of this presentation are:

1. Provide a definition of sedation and levels of sedation, as well as standards of monitoring.
2. Outline the benefits of propofol over benzodiazepines.
3. Review the logic, benefits and practicalities of propofol TCI versus intermittent bolus or manual infusion
4. Provide a summary of indications of remifentanyl for sedation using TCI, and the pharmacodynamic interactions with propofol.

Presenter:

Keith Anderson, B.Sc, MB, ChB, FRCA, PhD
Assistant Clinical Professor, University of Calgary
Anesthesiologist, Foothills Medical Centre Calgary

Please RSVP by Friday, June 21 at MMSMarketingCanada@bd.com. Visit us at **Booth 119** during exhibitor hours.
